Designing Behaviors for Interactive Devices
University of California at Berkeley

SUBJ: Call for Study Participants: Designing Behaviors for Interactive Devices

You are invited to participate in a study evaluating a software tool for interactive device design.

The study involves a week long study where you will be given four 60 minute design tasks. These tasks will ask you to design behaviors (blinking lights, spinning motors) for an interactive device we will provide. These tasks can be completed at anytime.

Participants will be compensated $65 for their participation. You must be 18 or older, be computer literate, and have a laptop which can be used to run some custom software to participate.

If you would like to know more information about the study, contact Cesar Torres at cearto@berkeley.edu

Thanks,
Cesar Torres & Eric Paulos
